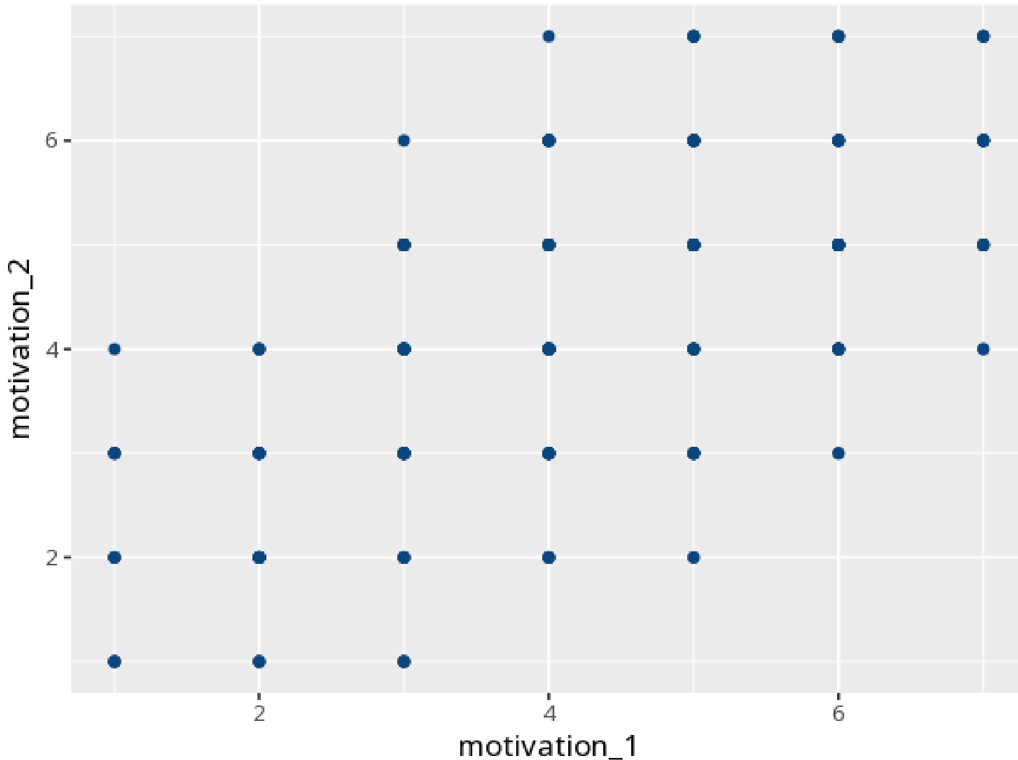
1 Kendall's tau

Pair	τb [95% CI]	z	p	N
motivation_1 – motivation_2	0.53 [0.47, 0.60]	10.64	<.001	240



τ (Kendalls tau-b) is a rank correlation based on concordant vs. discordant pairs, with a correction for ties - well suited to small samples and many ties. Sign = direction, magnitude = strength; p tests significance. Your significance threshold (α) is 0.05.

A Kendall's tau-b correlation gave τ=.53 [.47, .60], p < .001, N=240.

Statistical basis: Kendall's tau-b rank correlation (tie-corrected) (Kendall, M. G. (1938). "A new measure of rank correlation." Biometrika, 30(1/2), 81-93.).
