First confirm the measurement model (loadings high, CR/AVE adequate) and overall fit indices. Then read the structural paths: each std. β with p/CI is a hypothesized relationship between constructs; R^2 shows variance explained in each outcome construct. CB-SEM is confirmatory: the measurement model must be specified from theory a priori - any post-hoc respecification (e.g. from modification indices) is exploratory, must be reported as such, and ideally cross-validated on a fresh sample.

The model fit well (CFI=1.00, RMSEA=.01, SRMR=.03); the path from esg to intent gave β=.43, p $<$ .001.

Statistical basis: Model estimation (lavaan) (Rosseel, Y. (2012). "lavaan: An R Package for Structural Equation Modeling." Journal of Statistical Software, 48(2), 1-36.); Fit-index cutoffs (CFI/TLI $\geq$ .95, RMSEA $\leq$ .06, SRMR $\leq$ .08) (Hu, L., Bentler, P. M. (1999). "Cutoff criteria for fit indexes in covariance structure analysis: Conventional criteria versus new alternatives." Structural Equation Modeling, 6(1), 1-55.); Cutoffs are guidelines, not pass/fail gates (Marsh, H. W., Hau, K. T., Wen, Z. (2004). "In search of golden rules: Comment on hypothesis-testing approaches to setting cutoff values for fit indices." Structural Equation Modeling, 11(3), 320-341.); RMSEA 90% confidence interval (MacCallum, R. C., Browne, M. W., Sugawara, H. M. (1996). "Power analysis and determination of sample size for covariance structure modeling." Psychological Methods, 1(2), 130-149.); AVE / Fornell-Larcker discriminant validity (Fornell, C., Larcker, D. F. (1981). "Evaluating structural equation models with unobservable variables and measurement error." Journal of Marketing Research, 18(1), 39-50.); Reliability preference (ω over α) (McNeish, D. (2018). "Thanks coefficient alpha, we'll take it from here." Psychological

Methods, 23(3), 412-433.); Reporting standard (APA JARS-Quant) (Appelbaum, M., Cooper, H., Kline, R. B., Mayo-Wilson, E., Nezu, A. M., Rao, S. M. (2018). "Journal article reporting standards for quantitative research in psychology." American Psychologist, 73(1), 3-25.); Double-mean-centering for latent moderation (semTools::indProd) (Lin, G. C., Wen, Z., Marsh, H. W., Lin, H. S. (2010). "Structural equation models of latent interactions: Clarification of orthogonalizing and double-mean-centering strategies." Structural Equation Modeling, 17(3), 374-391.); Mean-centering strategy for latent interactions (precursor) (Marsh, H. W., Wen, Z., Hau, K. T. (2004). "Structural equation models of latent interactions: evaluation of alternative estimation strategies and indicator construction." Psychological Methods, 9(3), 275-300.); Simple slopes at -1SD/mean/+1SD (Aiken, L. S., West, S. G. (1991). Multiple Regression: Testing and Interpreting Interactions. Sage.).
