01 • SUMMARY STATISTICS

central tendency & spread of numeric variables

Table. Descriptive statistics

Group	Variable	N	M	SD	95% CI	Min	Max	Median	Skew	Kurtosis (excess)
female	score	7	75.29	6.78	[69.02, 81.55]	66.00	85.00	75.00	−0.03	−1.63
male	score	7	76.00	7.39	[69.16, 82.84]	69.00	88.00	72.00	0.48	−1.67
female	anxiety	6	34.17	8.57	[25.18, 43.16]	22.00	45.00	33.50	−0.06	−1.75
male	anxiety	7	31.00	7.59	[23.98, 38.02]	19.00	40.00	33.00	−0.28	−1.65

one row per chosen variable; a Group column is added when "Group by" is used (stats repeat per group). 95% CI is the t-based confidence interval for the mean; kurtosis is excess (normal = 0).

Figure. Distribution — score

Figure. Distribution — anxiety

How to read this test

Descriptives summarize your data: the mean and median show the center, the SD and range show the spread, and skew/kurtosis show how far the shape departs from a normal bell curve. There is no significance test here.

APA template: Table X reports descriptive statistics for the study variables.
