01 • WILCOXON SIGNED-RANK

nonparametric paired comparison

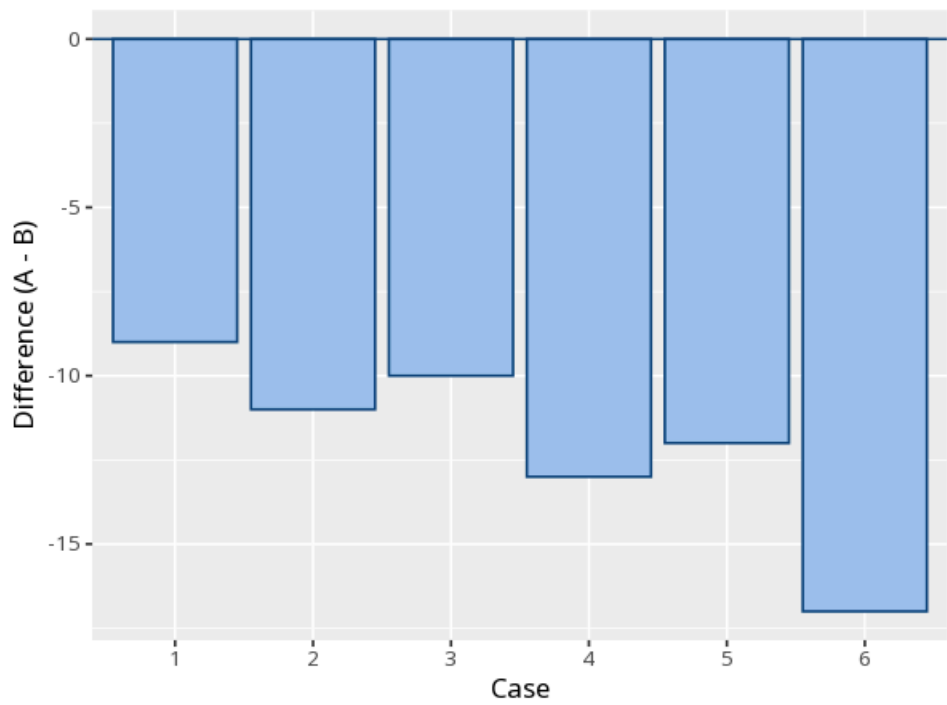

Table 1. Rank summary

Sign	N	Mean rank	Sum of ranks
Positive	0	—	—
Negative	6	3.50	21.00
Ties	0	—	—

Table 2. Signed-rank test

V / W	Z	p	r [95% CI]	Median diff [95% CI]
0.00	-2.20	.031	-1.00 [-1.00, -1.00]	-11.50 [-17.00, -9.00]

Figure. Change per case

How to read this test

The nonparametric counterpart to the paired t-test. It ranks the size of each paired change; a p below alpha means a systematic shift between the two conditions, with r as the effect size. The shift maps to the median difference only when the within-pair differences are roughly symmetric; the sign of the median difference (or Hodges-Lehmann estimate) gives the direction. Your significance threshold (α) is 0.05.

APA template: A Wilcoxon signed-rank test gave $V=0.00$, $Z=-2.20$, $p = .031$, $r=-1.00$ $[-1.00, -1.00]$.
