

1 Wilcoxon signed-rank

Sign	N	Mean rank	Sum of ranks
Positive	0	—	—
Negative	6	3.50	21.00
Ties	0	—	—

V / W	Z	p	r [95% CI]	Median diff [95% CI]
0.00	−2.20	.031	−1.00 [−1.00, −1.00]	−11.50 [−17.00, −9.00]

The nonparametric counterpart to the paired t-test. It ranks the size of each paired change; a p below alpha means a systematic shift between the two conditions, with r as the effect size. The shift maps to the median difference only when the within-pair differences are roughly symmetric; the sign of the median difference (or Hodges–Lehmann estimate) gives the direction. Your significance threshold (α) is 0.05.

A Wilcoxon signed-rank test gave $V=0.00$, $Z=-2.20$, $p = .031$, $r=-1.00$ [−1.00, −1.00].
