01 • SPEARMAN CORRELATION

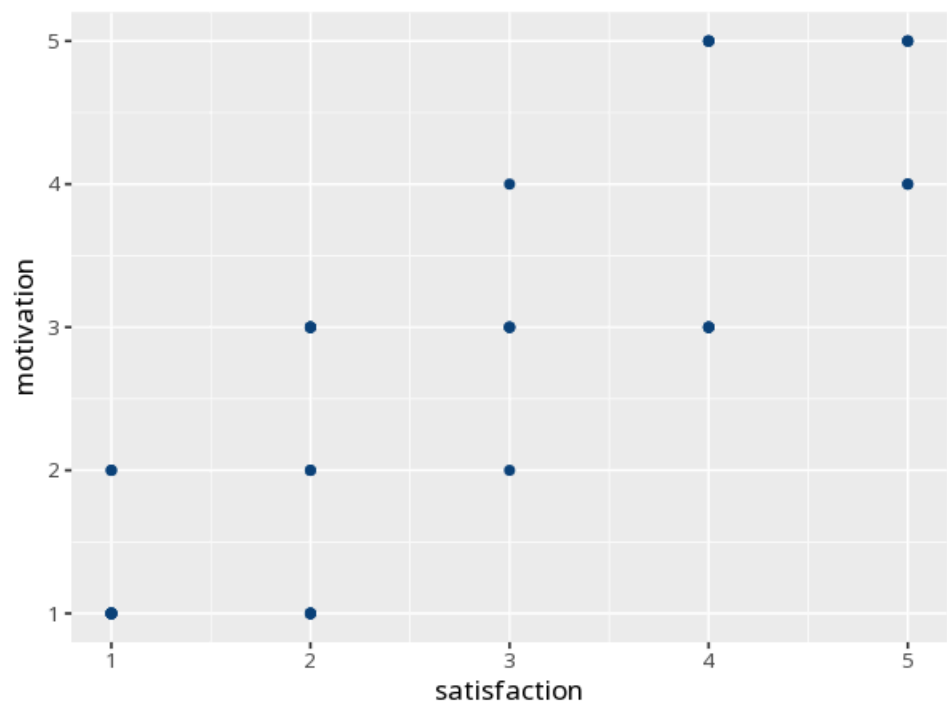

rank association (ordinal / monotonic)

Table. Spearman correlation

Pair	ρ [95% CI]	S	p	N
satisfaction – motivation	0.85 [0.76, 0.90]	1632.68	<.001	40

ρ CI from a seeded percentile bootstrap (2000 resamples); cor.test does not return one for rank correlation.

Figure. Relationship

How to read this test

ρ measures how well the relationship follows a consistent up-or-down trend (monotonic), using ranks. Read sign and magnitude like Pearson's r ; p tests significance. Your significance threshold (α) is 0.05.

APA template: A Spearman correlation gave $\rho=.85$ [.76, .90], $p < .001$, $N=40$.
