01 • SIMPLE LINEAR REGRESSION

one numeric outcome, one predictor

Table 1. Regression coefficients

	(1)	β
(Intercept)	20.07 (4.54) [10.88, 29.26]	
pre_score	0.64 (0.07) [0.49, 0.79]	0.81
Num.Obs.	40	
R ²	0.66	
R ² Adj.	0.65	
F	73.57	
RMSE	5.46	
AIC	255.36	
BIC	260.43	
Log.Lik.	-124.68	

assumption checks: linearity, normality of residuals, homoscedasticity.

Figure. Fitted-line scatter

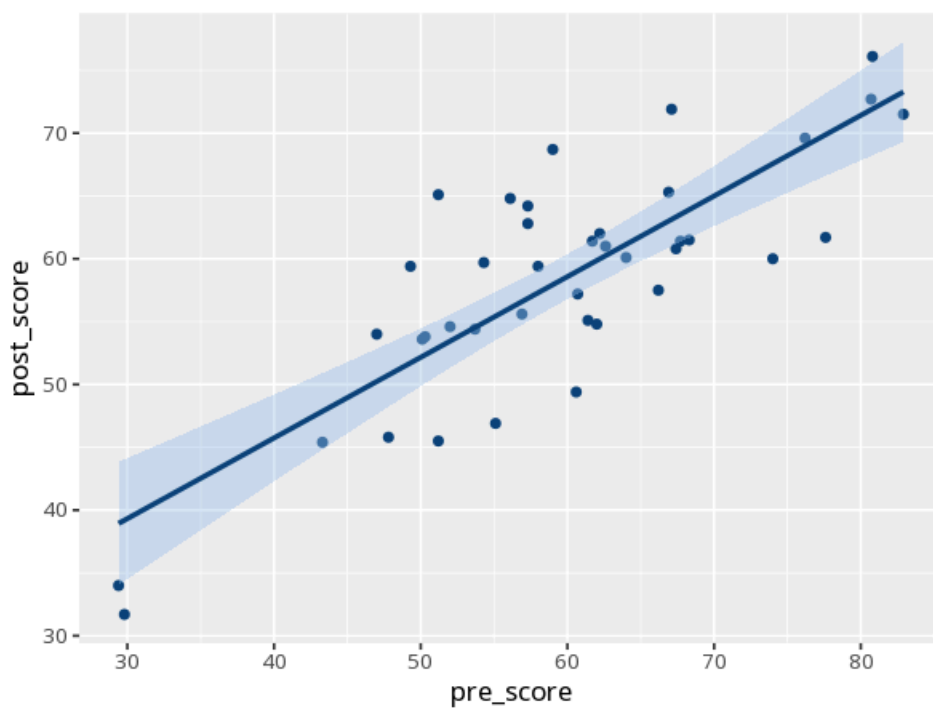

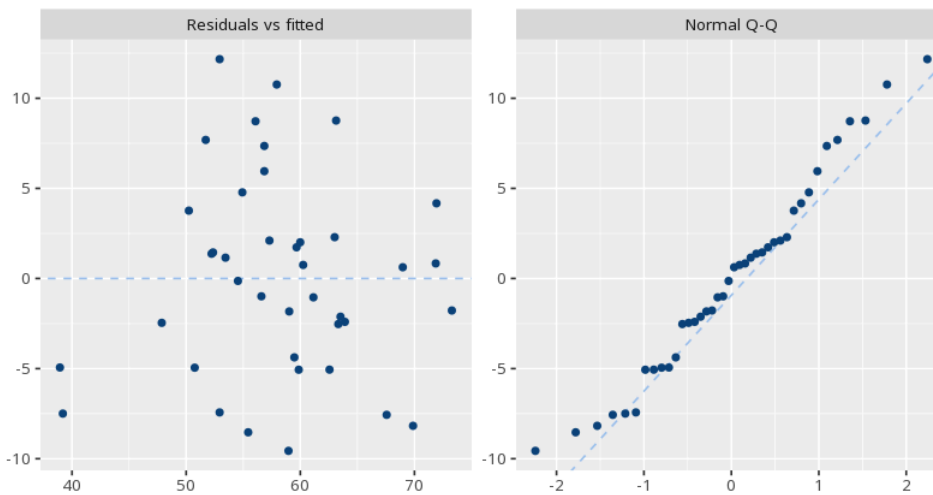

Figure. Residual diagnostics

How to read this test

R^2 is the share of outcome variance explained. The predictor's B is the slope (change in outcome per unit), with p testing whether it differs from zero and the CI showing precision. β is the standardized slope (change in outcome in SDs per 1 SD change in the predictor), useful for comparing effect sizes on a common scale. Your significance threshold (α) is 0.05.

APA template: A simple linear regression gave $B=0.64$, $t(38)=8.58$, $p < .001$, $R^2=.66$.
