

1 Simple linear regression

	(1)	β
(Intercept)	56.29 (1.42) [53.50, 59.08]	
study_hours_per_week	1.39 (0.20) [0.99, 1.78]	0.41
Num.Obs.	240	
R ²	0.17	
R ² Adj.	0.17	
F	48.59	
RMSE	7.41	
AIC	1648.70	
BIC	1659.14	
Log.Lik.	-821.35	

R^2 is the share of outcome variance explained. The predictor's B is the slope (change in outcome per unit), with p testing whether it differs from zero and the CI showing precision. β is the standardized slope (change in outcome in SDs per 1 SD change in the predictor), useful for comparing effect sizes on a common scale. Your significance threshold (α) is 0.05.

A simple linear regression gave $B=1.39$, $t(238)=6.97$, $p < .001$, $R^2=.17$.

Statistical basis: Ordinary least squares regression coefficient (B), SE, CI (R Core Team (2026). R: A Language and Environment for Statistical Computing. R Foundation for Statistical Computing, Vienna.); Standardized coefficient (β) (Lüdtke D, Ben-Shachar MS, Patil I, Makowski D (2020). "Extracting, Computing and Exploring the Parameters of Statistical Models using R." Journal of Open Source Software, 5(53), 2445.).
