AVE (Average Variance Extracted) is the average share of item variance a construct captures; $\geq .50$ means items converge on their construct (Fornell & Larcker, 1981). CR (Composite Reliability) $\geq .70$ indicates acceptable construct reliability. ω (McDonald's omega) is the preferred headline reliability coefficient; α (Cronbach's) is shown as a secondary/legacy coefficient. For discriminant validity, Fornell–Larcker (Table 2): each construct's $\sqrt{\text{AVE}}$ (bold diagonal) should exceed its correlations with other constructs. HTMT (Table 3): values $< .85$ support discriminant validity for conceptually distinct constructs — use HTMT as the primary criterion and Fornell–Larcker as a legacy check. $\text{AVE} < .50$ may still be acceptable when $\text{CR} > .60$ (F&L caveat), but treat this as a caution, not a lenient pass. All cutoffs are heuristics, not pass/fail gates. Applies to reflective constructs only.

Convergent validity was supported, all $\text{AVE} \geq .50$ and $\text{CR} \geq .70$; discriminant validity held, all $\text{HTMT} < .85$.

Statistical basis: AVE (average variance extracted) convergent validity, $\geq .50$ (Fornell, C., Larcker, D. F. (1981). "Evaluating structural equation models with unobservable variables and measurement error." *Journal of Marketing Research*, 18(1), 39-50.); CR (composite reliability) $\geq .70$ acceptable (Nunnally, J. C. (1978). *Psychometric Theory* (2nd ed.). McGraw-Hill.); CR $\geq .70$ threshold, independent corroboration (Bagozzi, R. P., Yi, Y. (1988). "On the evaluation of structural equation models." *Journal of the Academy of Marketing Science*, 16(1), 74-94.); HTMT $< .85$ discriminant validity (primary criterion) (Henseler, J., Ringle, C. M., Sarstedt, M. (2015). "A new criterion for assessing discriminant validity in variance-based structural equation modeling." *Journal of the Academy of Marketing Science*, 43(1), 115-135.); Reliability preference (ω over α) (McNeish, D. (2018). "Thanks coefficient alpha, we'll take it from here." *Psychological Methods*, 23(3), 412-433.).
