

1 Summary statistics

Group	Variable	N	M	SD	95% CI	Min	Max	Median	Skew	Kurtosis (excess)
female	score	7	75.29	6.78	[69.02, 81.55]	66.00	85.00	75.00	−0.03	−1.63
male	score	7	76.00	7.39	[69.16, 82.84]	69.00	88.00	72.00	0.48	−1.67
female	anxiety	6	34.17	8.57	[25.18, 43.16]	22.00	45.00	33.50	−0.06	−1.75
male	anxiety	7	31.00	7.59	[23.98, 38.02]	19.00	40.00	33.00	−0.28	−1.65

Descriptives summarize your data: the mean and median show the center, the SD and range show the spread, and skew/kurtosis show how far the shape departs from a normal bell curve. There is no significance test here.

Table X reports descriptive statistics for the study variables.

Statistical basis: Descriptive statistics table (mean, SD, median, min/max, N, skew, kurtosis) (Revelle W (2024). psych: Procedures for Psychological, Psychometric, and Personality Research. Northwestern University, Evanston.).
