

1 Simple linear regression

	(1)	β
(Intercept)	20.07 (4.54) [10.88, 29.26]	
pre_score	0.64 (0.07) [0.49, 0.79]	0.81
Num.Obs.	40	
R ²	0.66	
R ² Adj.	0.65	
F	73.57	
RMSE	5.46	
AIC	255.36	
BIC	260.43	
Log.Lik.	-124.68	

R^2 is the share of outcome variance explained. The predictor's B is the slope (change in outcome per unit), with p testing whether it differs from zero and the CI showing precision. β is the standardized slope (change in outcome in SDs per 1 SD change in the predictor), useful for comparing effect sizes on a common scale. Your significance threshold (α) is 0.05.

A simple linear regression gave $B=0.64$, $t(38)=8.58$, $p < .001$, $R^2=.66$.

Statistical basis: Ordinary least squares regression coefficient (B), SE, CI (R Core Team (2026). R: A Language and Environment for Statistical Computing. R Foundation for Statistical Computing, Vienna.); Standardized coefficient (β) (Lüdtke D, Ben-Shachar MS, Patil I, Makowski D (2020). "Extracting, Computing and Exploring the Parameters of Statistical Models using R." Journal of Open Source Software, 5(53), 2445.).
