

1 Spearman correlation

Pair	ρ [95% CI]	S	p	N
motivation_1 – exam_score	0.06 [−0.06, 0.18]	2155763.30	.321	240

ρ measures how well the relationship follows a consistent up-or-down trend (monotonic), using ranks. Read sign and magnitude like Pearson's r ; p tests significance. Your significance threshold (α) is 0.05.

A Spearman correlation gave $\rho=.06$ [−.06, .18], $p = .321$, $N=240$.

Statistical basis: Spearman's rank correlation (ρ) (Spearman, C. (1904). "The proof and measurement of association between two things." American Journal of Psychology, 15(1), 72-101.).
